NOTE: All signs are subject to Design Review approval as per Section 124 (Design Review) of the Planning & Zoning Ordinance, before a sign permit will be issued.

It is agreed to erect or construct this sign in conformity with the laws of the Town of Camp Verde and the State of Arizona (ADOT). Drawings must be on the attached 8.5X11 plot plan form or on a sheet of paper of the same size for the permanent file (Either professionally rendered or have a professional appearance). Sign must be erected within six (6) months of the date of issuance. Signs requiring footings and/or electric require engineered plans and a building permit, which shall be issued by the Building Department. All signs must conform to the requirements of the Town of Camp Verde Planning & Zoning Ordinance Section 118 Sign Regulations. In addition, lighting used for all externally illuminated signs shall conform to Section 120 Outdoor Lighting. All illuminated signs shall be turned off at 10:00 p.m. or when the business closes, whichever is later.

Dear Building Official:

This is to let you know that we are in the process of mailing annual certificates to construction contractors for purposes of compliance with **ARS § 42-5007**. This law requires that building authorities obtain a certificate from the Department of Revenue to ensure that the bonding requirement has been met prior to the issuance of any building permit for projects of \$50,000 or more in value. All qualified contractors should receive their certificate by July 31, the expiration date of the last certificates.

There are three versions of certificates that represent compliance with the bond requirement: An annual certificate issued by the Department of Revenue; a one-time exemption; and a receipt for a bond for the actual project. Please note that the one-time exemption and receipt for bond must specify the location of the project site. Examples of the different types of certificates are enclosed for reference, along with the guidelines for compliance with this law.

For any questions regarding these procedures or assistance to contractors, please contact the Bond Compliance Officers at (602) 716-6056.

Sincerely,

Tom Waters

Falsification of information on this document for the purpose of evading State licensing laws is a Class II misdemeanor pursuant to A.R.S. §13-2704.

Attention Building Permit Applicant:

The Town of Camp Verde Building Department is now requiring that a lumen calculation sheet be submitted with all permits for new construction; for both residential and commercial development. To help you understand the information needed to fill out the form, we have included with your building permit application a graphic illustration of the differences between shielded and unshielded light fixtures and a lumens calc sheet of different types of light bulbs. You must use the maximum size bulb allowed by the manufacture of the lamp to figure your lumens. This will be found on the lamp itself or on the packing material.

Unless you are a part of a development project (for an example: a developed subdivision or master planned community) you are allowed at least 5500 unshielded lumens or 100,000 total lumens for your project even if your lot size is under an acre.

For more information on our lighting ordinance you may visit our website at www.cvaz.org and click on the Planning and Zoning Ordinance and go to Section 120 or call our office at (928) 567-8514 and staff will answer any of your questions.

Please help us protect our dark skies and rural lifestyle.

*Gas Station Canopies: See Lighting Regulation, under light measurement, for calculating lumen output.

Ball fields and outdoor display areas which exceed 100,000 lumen per acre: I hereby certify that lighting associated with related facilities described above is no greater than minimum illuminance levels for the activity recommended by the IESNA.

Not to exceed 5,500 Unshielded lumen per net acre; nor more than 100,000 total lumen per net acre, overall.

Revised 8/09/2008

O. Addendums/Additional Information:

1. Shielding:

A practical working way to determine if a fixture or tube is fully shielded: if the lamp or tube, any reflective surface, or lens cover (clear or prismatic) is visible when viewed from above or directly from the side, or from any angle around the fixture or tube, the fixture or tube *is not* fully shielded.

Examples of fixtures that are Fully Shielded (Note: to be fully shielded these fixtures must be closed on top and mounted such that the bottom opening is horizontal):

Examples of fixtures that are NOT Fully Shielded:

* Note: even though the lamp in these fixtures is shielded from direct view when viewed from the side or above, reflective surfaces and/or lens covers are directly visible from the side.

Note for luminous (neon) tubes: when such lighting is installed under or behind a roof overhang, if the roof-line or eave is not horizontal the tubing may be visible from above when viewed from the side and therefore be unshielded.

2. Typical Lumen Outputs and Energy Costs for Outdoor Lighting

Per year costs based on 4000 hours operation (all night every night) and \$0.10/kwh energy cost. Power costs are for lamps only; they do not include ballast losses used with HID lamps (LPS, HPS, MH and fluorescent). Ballast losses have typically been somewhat larger for LPS lamps than for other types, though not enough to offset the increased luminous efficiencies of these lamps. This effect has been decreasing with the newer ballasts.
